

Trust

Upholding trust through security, privacy and ethics

The pervasive influence of digital technologies on society at large raises the stakes for how all technology companies address security, privacy and ethics. Customers should expect their technology provider to protect their best interests, and team members should expect the same from their employer.

Our approach to trust

As an industry leader, it is important people trust what we build, trust who we are and trust how we do our work. That is why we are committed to driving trust in our products and services, our internal processes and in our ecosystem across security, privacy and ethics.

2030 GOAL

By 2030, our customers and partners will rate Dell Technologies as their most trusted technology partner

We announced this goal in FY23 and worked in FY24 to identify best practices for measuring trust among customers and partners. We aim to make progress against our key drivers for Trust and will continue to evolve how to best measure and communicate progress against this goal.

KEY DRIVERS

By 2024, Dell will make available the first validated Zero Trust solution, accredited by the U.S. government and commercially available to targeted global public and private sector organizations

Dell's Zero Trust solution, Project Fort Zero, is awaiting a testing date for validation from the U.S. Government. We anticipate publishing a general availability date shortly following the successful completion of the U.S. Government validation test.

By 2025, 100% of actively sold Dell-designed and branded products and offerings will publish a software bill of materials (SBOM), providing transparency on third-party and open-source components

We are working to determine the full scope of actively sold Dell-designed and branded products and offerings and to establish our metric pipeline. At the close of FY24, we had generated SBOMs for 70 Dell-designed and branded products and are on track to meet this key driver by 2025.

By 2030, all new Dell products and offerings that use authentication will offer a password-less authentication mechanism

We are working to ensure our product architectures enable password-less authentication, including certificate-based management, and incorporation of hardware-bound authentication methods are being established and adopted into roadmaps. Current solutions, such as Secure Component Verification and support for Windows Hello, provide early capabilities for end-users.

Each year through 2030, we will make it easier and faster for customers to exercise choice and control over their personal data

In FY24, Dell made customer choice and control over personal data easier and faster through the expansion of our [enhanced Privacy Center](#), which is now available in 74 locations globally.
