

Material topic	Goal	Metric	Methodology
Advancing sustainability			
Circular economy	By 2030, more than half of our product content will be made from recycled, renewable or reduced carbon emissions material	Percentage by weight of recycled, renewable and reduced carbon emissions content in shipped products	The scope includes of all Dell Technologies-branded products shipped within the reporting period. The measurement is based on the estimated amount of recycled and renewable materials as a percentage of total weight of materials used. In FY23 we expanded our goal to include reduced carbon emissions material (see the Glossary of this report), and the change is reflected within the reported metrics beginning in FY24.
	By 2030, 100% of our packaging will be made from recycled or renewable material, or will utilize reused packaging	Percentage of recycled, renewable or reused material content in packaging	The scope includes packaging of all Dell Technologies-branded materials sent to customers. The measurement is based on survey responses from packaging suppliers across multiple lines of business, used to determine approximate percentages of total weight of recycled, renewable or reusable materials in our packaging. In FY23, we expanded our goal to include where we utilize reused packaging — original packaging that has been recollected and reused. However, measurement and reporting capabilities for reused packaging are still in development and we now expect to reflect the expanded scope of this goal in future reports.
	By 2030, for every metric ton of our products a customer buys, one metric ton will be reused or recycled	Percentage of product collected (percentage by weight of total captured for recycling and reuse over products sold)	The scope of this goal includes products received by Dell-owned channels within the reporting period. In FY23, we expanded the scope of this goal to include products received by all channels, rather than products received by Dell-owned channels, within the reporting period. We further refined how we measure the goal, from units to overall weight, as a percentage of total weight of product sold (in metric tons) in FY23.
Transforming lives			
Digital inclusion	By 2030, we will improve 1 billion lives through digital inclusion	Total number of people reached (cumulative measurement beginning FY20, direct + indirect reach)	The scope includes the total number of individuals reached directly or indirectly through Dell programs such as regional giving and social innovation (e.g., Digital LifeCare). Due to the vast geographical spread of data and limited capacity of partners to verify data at the granularity of each beneficiary, our direct and indirect impact metrics are not a unique representation of lives impacted. In FY24, we refined our methodology, tracking unique representation for our direct impact. Indirect impact is not tracked uniquely due to the nature of the community outreach, and this practice is in line with common measurement and evaluation practices across the industry. Impact measurement and reporting is evolving and maturing at a rapid pace. To ensure Dell’s measurement methodology aligns with latest industry best practices, Dell will undergo third party analysis on the 1 billion lives goal methodology in FY25. The analysis and adjustments as a result of the analysis will be shared and reflected in our FY25 ESG report.
	Key Driver: Each year through 2030, 50% of the total people directly reached will be those who identify as girls and women, or underrepresented groups	Percentage of people reached directly who identify as girls and women, or underrepresented groups (direct reach only)	This metric captures the percentage of those who identify as girls, women or underrepresented groups out of the total number of individuals directly reached within the reporting year. “Girls” and “women” are individuals who self-identify as female. The term “underrepresented” includes but is not limited to the following groups: girls or women, racial/ethnic minorities, beneficiaries requiring an accommodation (mental, physical, sensory, cognitive and neurodiverse disability), LGBTQ+ persons, low socioeconomic groups. To ensure our methodology aligns with industry best practices, we will be undertaking third-party analysis on our 1 Billion Lives goal methodology in FY25 - inclusive of this key driver. We expect any adjustments as a result of the analysis will be reflected in future reports.
	Key Driver: Each year through 2030, we will deliver future-ready skills development for workers in our supply chain	Total number of future-ready skills training hours at in-house manufacturing locations	The scope is the total future-ready skills training data for all in-house manufacturing locations in our pilot program.
Total number of future-ready skills training hours in supply chain		The scope is the total future-ready skills training data for two key suppliers in our pilot program.
