

A white Schneider truck is driving on a two-lane road that stretches into the distance. The road is flanked by tall, bare trees, suggesting a late autumn or winter setting. The sun is low on the horizon to the right, creating a warm glow and long shadows. The sky is a mix of blue and orange. The Schneider logo is visible on the side of the truck's trailer.

INTRODUCTION

The issue of sustainability is becoming increasingly important in all areas of life. In 2015, an agreement was adopted at the climate conference in Paris that obliges all United Nations states to reduce greenhouse gas emissions. The United Nations has 193 member states and represents over 99% of the world's population.

An important milestone in the Paris Agreement is the goal to reduce CO₂ emissions by minus 50% by 2030 compared to 1990 levels. By 2050, the target is net zero. "Net zero means that all greenhouse gas emissions caused by humans must be removed from the atmosphere again through reduction measures and thus the Earth's climate balance is net zero, i.e. after deductions by natural and artificial sinks."

The primary goal is to reduce global warming to below plus 2°C compared to pre-industrial times. Due to this ambitious and necessary target of the United Nations, organizations such as Schneider & Co. Ltd have to deal with the topic more intensively and take measures at an early stage in order to fulfill the requirements imposed by the state.

With the voluntary introduction of a sustainability management system, the implementation of system-supported calculation of CO₂ values in transport as well as in our own corporate carbon footprint and regular reporting on this, we are increasing our contribution to the preservation of our natural basis of life and the fair shaping of our society. The continuous improvement of our environmental performance as well as the possibility to provide our customers with CO₂ data on their transports and to support them in their own efforts are in the foreground.

With the establishment and expansion of a system for measuring and controlling the generally recognized sustainability factors, we want to fulfill our duty to our stakeholders to work together with them on the relevant issues through transparency, because internationally active groups in particular are in the public eye and are increasingly required to comply with the ecological framework conditions of their clients.

In the successive structuring of its reporting, the Schneider Group is guided by the standards of the globally recognized Global Reporting Initiative (GRI). In addition to ecological aspects, these also include economic and social factors for sustainable development in a holistic sense.

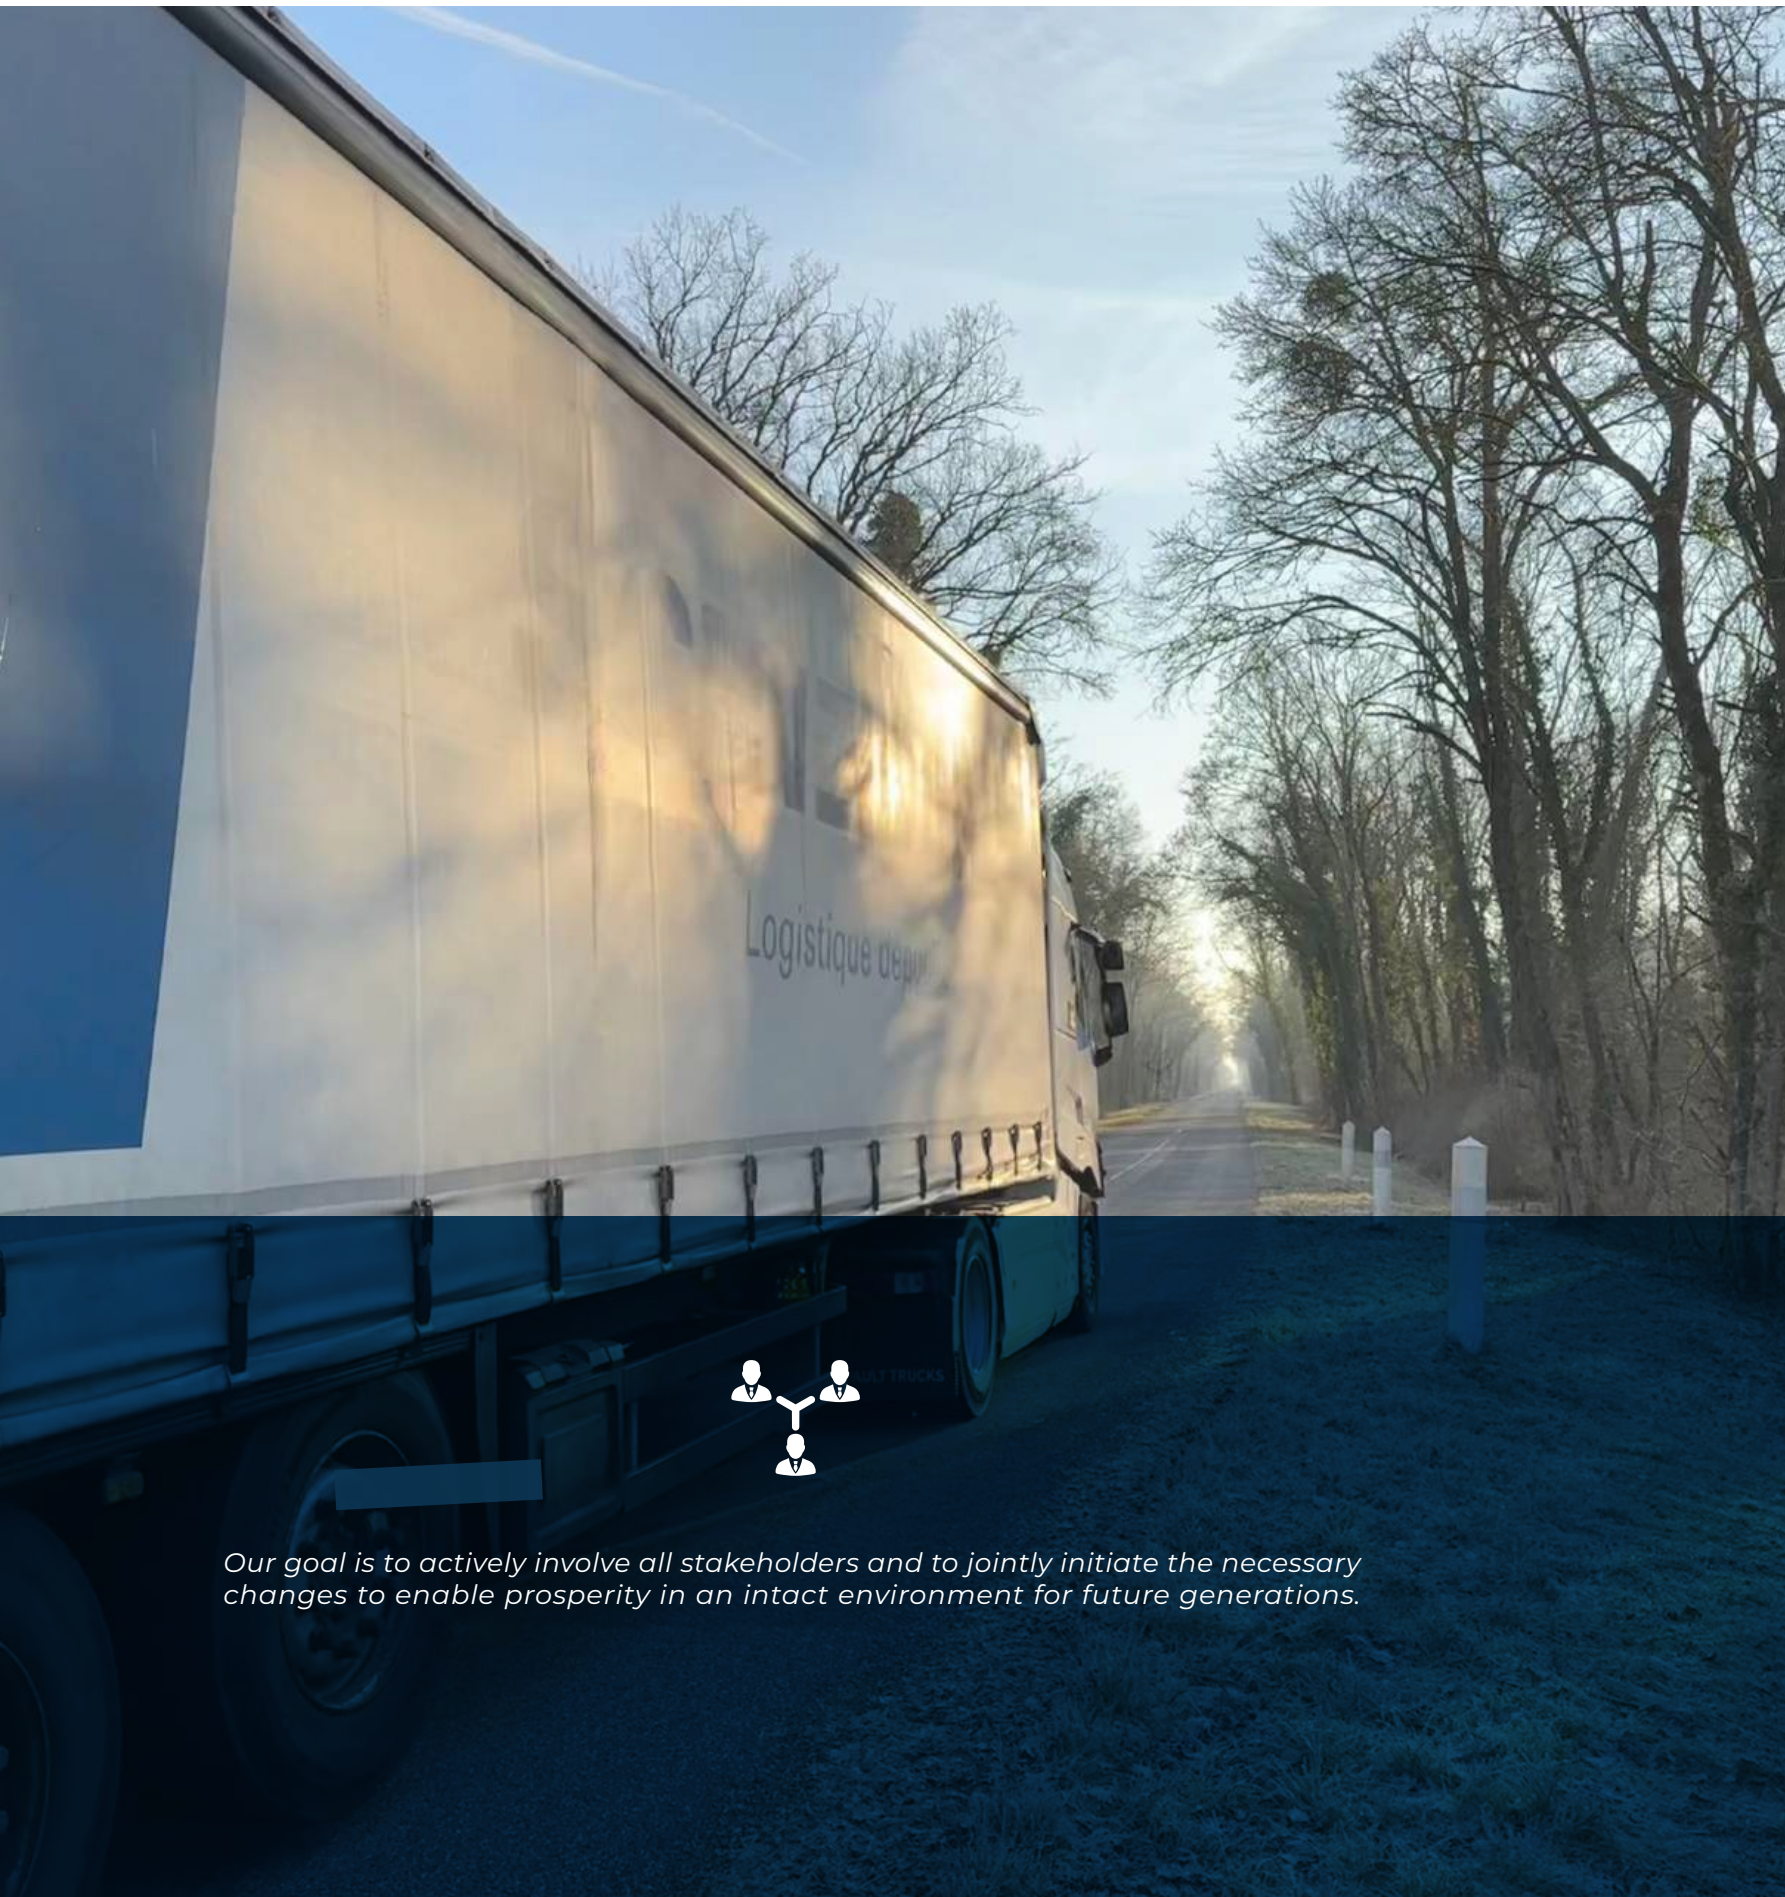

RESPONSIBILITY

The management bears the responsibility for the implementation of sustainability in the company.

The Quality and Environmental Management Officer (Q&E) is responsible for setting up, maintaining and updating the system.

Each employee is also responsible for environmentally sound behavior and actions during working hours and beyond.

Our goal is to actively involve all stakeholders and to jointly initiate the necessary changes to enable prosperity in an intact environment for future generations.

ENVIRONMENTAL POLICY

As a company with 159 years of history and tradition, we act for the long-term and are committed to environmental and social sustainability by incorporating these aspects into our business decisions and the management of our resources and infrastructure.

We regularly examine our service processes with regards to their environmental impact. The Schneider Group provides services primarily with the help of independent third parties. It is therefore essential that we carefully examine and select our suppliers, taking into account environmentally friendly and resource-saving production and delivery.

We adhere to the legal framework and work in an open dialog together with the authorities and public institutions.

The Executive Board formulates the sustainability policy in consultation with the Board of Directors. This policy contains the environmental guidelines, principles of action and overall goals of our company and forms the framework for setting environmental goals and measures.

We ensure that our sustainability policy

- is appropriate for the purpose of our business,
- includes a commitment to comply with legal and other requirements and to continuously improve the effectiveness of our measures,
- provides a framework for setting and evaluating sustainability goals in line with international standards is (including Agenda 2030 and the Sustainable Development Goals),
- is communicated, understood and lived by all employees in our company,
- is transparent and accessible to the interested general public.

02

COMPANY PROFILE

“ WE LOOK BACK
 ON 159 YEARS OF
 EXPERIENCE.

1865-1910

Company founded by D. Wölfflin-Lotz. Erhard Schneider, a businessman from Basel, becomes managing director.

First transports abroad e.g. cheese exports to Tsarist Russia or textiles to the fashion metropolis of Paris.

1976-1990

Entry into the air freight business in Kloten and Geneva.

The New York presence has been converted from a sales delegation to a wholly owned company, Schneider Freight USA.

New branches in Paris, Lyon and Saint-Louis, as well as in the Netherlands.

2015-2017

Partnership with the Swiss investment company Invision for the 150th anniversary.

Acquisition of TTI and Prime Transport in the USA.

2018

André Strebel becomes the new CEO of the Schneider Group.

Development of the eCommerce business through the acquisition of TFM in Kloten.

Acquisition of ASR Forwarding in Basildon (UK). Opening of the Schneider ASR B.V. office in Rotterdam (NL).

2019-2020

Founding of the Schneider subsidiary FIBS with locations in Hong Kong, Shanghai, Guangzhou, Shenzhen, Ningbo, Qingdao, Tianjin and Xiamen.

Expansion through the acquisition of the logistics company Nova Traffic in Kloten and entry into the German market through the investment in Apriori at the Wangen im Allgäu location.

2021

FIBS expands to include locations in Singapore, Dubai, India (Delhi, Mumbai) and Thailand.

Acquisition of the Mercur Group with locations in Germany and Italy.

2022-2023

With the investment in Globaltrans, headquartered in Düsseldorf, the expansion on the German market follows.

Name change of the subsidiary SLT, with customs offices close to the border in Austria and Liechtenstein, to Schneider Logistik & Transport.

Acquisition of Global Freight Connections (GFC) in Basildon (UK) and BTC Spedition & Logistik in Vienna (AT).

2024

Our service portfolio has been expanded to include removal logistics.

In addition, the logos of apriori and Glob-Sped have been refreshed with a new design to emphasize their affiliation with the Schneider Group.

With the acquisition of Morrison Freight in Ipswich (UK), we are expanding our activities and strengthening our position in the UK.

OUR SERVICE PORTFOLIO

ROAD FREIGHT

- Groupage
- Partial and full loads
- Parcel and express services
- Cross-trade
- Dangerous goods (Excl. Cl. 1+7)
- Security systems for high-value goods
- National pick-up/delivery system

AIR FREIGHT

- Single or groupage consignments
- Express
- Sea-Air traffic
- Part and full charter
- Regular Consol shipments
- Crosstrade
- Dangerous goods
- IATA member

SEA FREIGHT

- Consol container
- Full container loads
- Reefer container
- Special Equipment
- Cross-trade
- Project shipments
- Pre- and on-carriage

LOGISTICS

- Supplier coordination
- Incoming goods
- Quality control
- Neutralisation
- Pick & Pack
- Inventory management
- Returns
- Cold storage
- Warehousing
- E-Commerce

CUSTOMS CLEARANCE

- EU customs clearance
- Electronic customs clearance systems
- Authorized consignee
- Fiscal representation
- Open customs warehouse
- Border clearance

SPECIAL TRANSPORTS

- Flowers and plants
- Express and courier services
- Heavy and project transports
- Rail transport
- Temperature controlled transports
- Event logistics
- Cross-trade
- Removal

SCHNEIDER IN BRIEF

VALUES

03

Corporate responsibility is important to us. We are convinced that taking economic, ecological and social aspects into account ensures the long-term success of our company. This attitude has a long tradition with us. After all, we can look back on 159 years of experience.

We enjoy an excellent reputation in the market, among business partners and employees. We value integrity and have high standards for ethically impeccable, legally compliant and rule-abiding actions.

With their daily commitment, our employees ensure that our customers receive a reliable and excellent service. Each employee knows exactly his or her tasks and responsibilities for fulfilling the required quality.

We motivate our employees through a pleasant, open working atmosphere and fair, performance-related remuneration. Safety at all workplaces and the protection of our employees' health are priority concerns of the management. Our dealings with each other are characterized by respect, tolerance, appreciation and fairness.

We continuously introduce technical and organizational measures to reduce or completely avoid the consumption of resources in the provision of our services. In the case of equal suitability and economic efficiency, we give preference to the use of environmentally friendly and energy-saving products and services.

Our customers, suppliers and subcontractors are involved in our efforts to the best of our ability. We maintain contact with authorities, institutions and the public in order to develop and implement suitable measures if necessary.

74 locations in Switzerland, in Europe, the USA and Asia

Founded in Basel 1865

1126 Employees

Medium-sized, international logistics company

667'808 shipments per year

Among the Swiss Top 500 companies

APPRECIATIVE

We value our customers, employees and business partners and enter into an open dialog with them. For us, respect and trust are the basis for successful cooperation.

PERSONAL

With verve and expertise, we are committed to our customers day after day. We accompany you personally through your challenges and help you to succeed. We maintain close and long-term contacts.

INDEPENDENT

Due to our entrepreneurial independence, we develop transparent, honest and optimal solutions for our customers.

SUSTAINABLE

We work in a value-creating and responsible manner at all hierarchical levels and in all business areas. We strive for sustainable success and treat our company and its resources with care.

SUSTAINABILITY STRATEGY

Schneider's sustainability strategy is aligned with the ESG criteria. These include **E-Environment**, **S-Social** and **G-Governance**.

These can be summarised in the following commitments:

- Introduction of global standards,
- Compliance with legal and regulatory requirements,
- Maintaining the health and safety of all employees,
- Annual reporting,
- Setting sustainability goals.

04

ENVIRONMENT

GRI: 305

An important milestone in Schneider's sustainability management is the partnership with the non-profit organization myclimate. In relation to the sustainability strategy of Schneider, the CO₂ balance is a key component of the actual analysis. In 2024, we also rolled out the myclimate Smart3 tool to all US branches.

The greenhouse gas balance sheet calculates direct and indirect as well as individual upstream and downstream categories of our locations. Transport emissions that arise as part of customer orders and are paid for by them are not included in this balance. More information on our transport activities can be found on page 17.

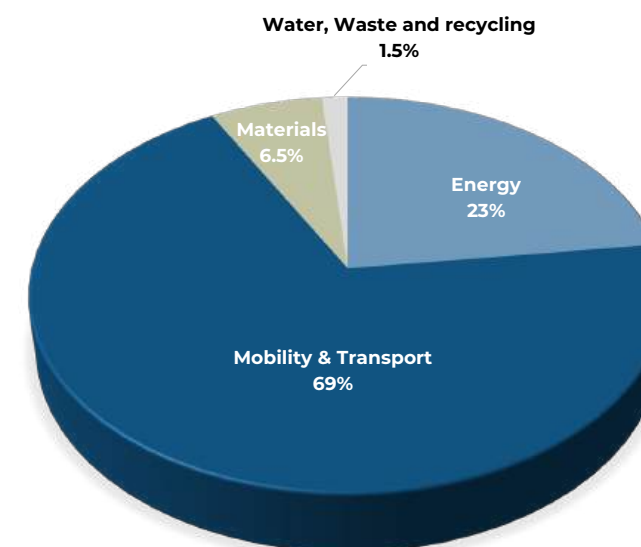

These include the following:

- Energy (electricity, heating and cooling)
- Mobility (commuter traffic, business traffic and overnight stays)
- Catering (drinks, snacks and meals)
- Materials (office supplies, tap water, printed materials, IT equipment)
- Waste and recycling (waste in waste incineration plant, recycling waste, waste water)

Results CCF:

The emissions are broken down by category so that the organization can set corresponding key figures or targets for improvement depending on the category. The analysis shows that 69% of emissions are attributable to the area of mobility – including commuting and business travel, overnight stays, as well as fuel consumption by company-owned vehicles and transport services provided by third parties.

23% of emissions are attributable to the energy used for heating/cooling and electricity. The remaining 8% of emissions were caused by catering and beverages, IT materials, waste and recycling.

Resulting goals:

- Roll out Smart3 tool to all branches worldwide by 2030
- Reduction of the CO₂ footprint in all branches by 5% annually
- 100% energy from renewable energy sources (currently 33%)

The target was deliberately kept moderate to gain initial experience.

WASTE MANAGEMENT

GRI: 306

Our waste management efforts reflect our commitment to a sustainable and environmentally conscious future. By raising awareness among our employees, we have laid an important milestone in our waste management and will continue to build on it.

Sustainable waste management is more important than ever and with today's technologies there are many ways for companies to implement this in their operations. First and foremost, we want to avoid waste. We rely on high-quality and durable equipment and resources. Before defective equipment is replaced, it should be repaired if possible.

By digitizing and training our sales team in online marketing, we use less and less print media, which saves additional resources. In addition, most of our branches are already equipped with a new TMS, which is designed to work paperless as much as possible. This allows us not only to avoid waste, but also to optimise and speed up our work processes.

In addition, we have sensitised all employees not to dispose of waste paper immediately, but to use it a second time as notepaper if possible. We then separate paper and cardboard from the rest of the waste to prepare it for recycling.

In all branches we have collection points for PET bottles, and in some cases also for aluminium. These are used diligently by our staff. The association PRS PET-Recycling Schweiz issues annual certificates stating how many PET bottles have been collected and CO₂ emissions saved.

CO₂-EMISSIONS TRANSPORT SERVICES

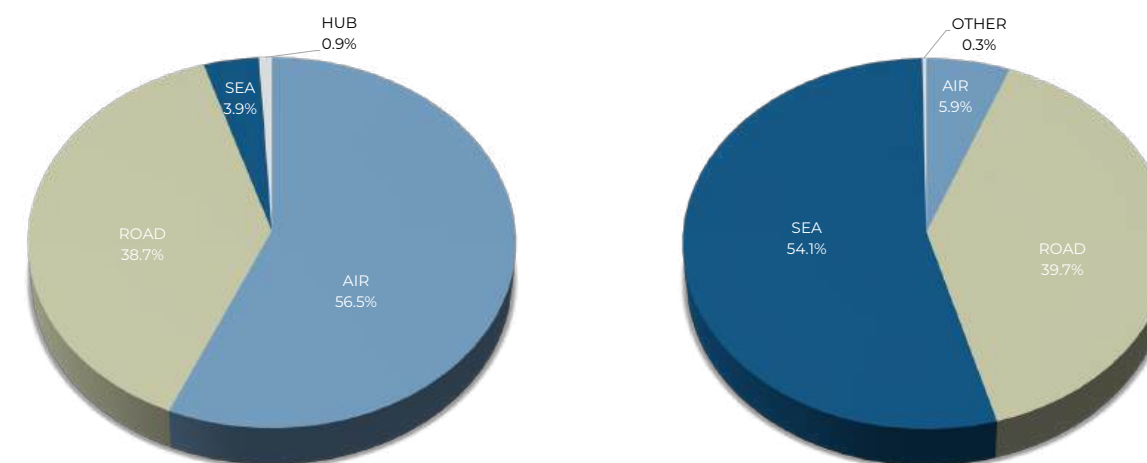

GRI: 305

In order to meet the steadily increasing demand from customers and to have a positive impact on the environment, Schneider has decided to have the CO₂ emissions per transport calculated. The aim is to provide customers with an annual report containing their consignments and the respective CO₂ emissions.

There are already many different software solutions on the market, which do not all perform the calculation according to the same standard and are therefore not all suitable for an international freight forwarding company. The most important criteria for Schneider were, on the one hand, that the software can calculate all means of transport and, on the other hand, that the result is CSR-compliant, the calculation is based on an internationally recognized standard and offers the possibility of an interface.

Total CO₂e per transport mode

Total freight volume in tonne-kilometres (tkm)

The evaluation showed that a large proportion of the emissions caused by the transport services of Schneider are generated by air freight consignments. Shipments sent by sea freight have far lower emissions.

In addition to the reports that can be made available to our customers, we would also like to support our customers in reducing their emissions by using environmentally friendly means of transport. We are also happy to support our clients in creating a resilient and sustainable supply chain.

SOCIAL

GRI: 402

EMPLOYER-EMPLOYEE RELATIONSHIP

A respectful, collaborative employer-employee relationship is the foundation of our success and sustainable development. We are proud of our achievements to date and will continue to work towards creating a working environment where all our employees feel valued, supported and inspired.

We maintain a very good and family-like relationship with our employees and have a remarkably high number of long-term employees. A family atmosphere is ingrained in our culture and we place great value on it.

In our large branches, we have also set up break rooms and thus offer our employees a place to retreat, but also an opportunity to socialise with team members.

In order to comply with the revised federal law, an equal pay analysis was carried out. The result is very pleasing. The difference in the reference month of October 2021 is only 3.4% (according to federal law, the difference may not exceed 5%).

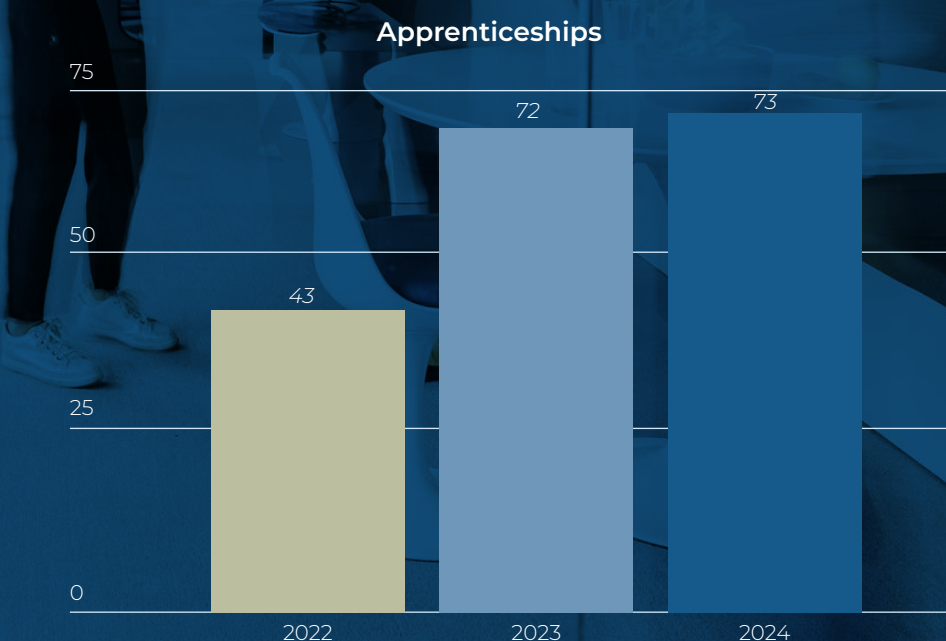

KPI EMPLOYEE SATISFACTION

The employees of Schneider play an essential role in the success of the organization. As one of the most important stakeholders of the organization, it is important to regularly check the well-being of the employees. With the expansion of Schneider's sustainability management, this data has now been collected for the first time. The evaluation of the employee survey showed that the employees at Schneider are very satisfied. By the reporting date, a global satisfaction rate of 85% had been indicated.

KPI APPRENTICESHIPS

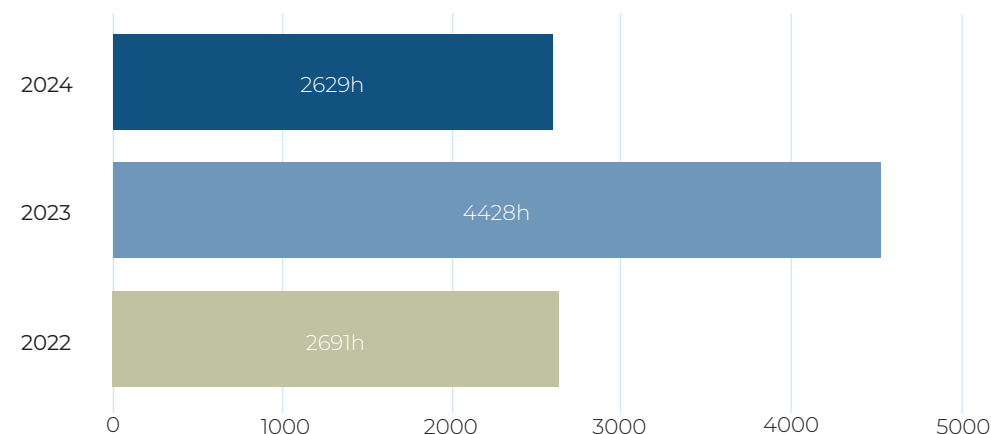

The number of apprenticeships is an important indicator in the social sector. Due to the ever-growing shortage of skilled workers, the organization has set itself the goal of increasing the number of apprenticeships.

KPI EDUCATION AND TRAINING

Schneider attaches great importance to employees being able to develop their skills. Accordingly, further training that brings added value not only to the employees but also to the company is financially supported. This motivates more and more employees to take up further training and to continue their professional development. As a result, the organization has a portfolio of employees with a high level of expertise and interest in the industry.

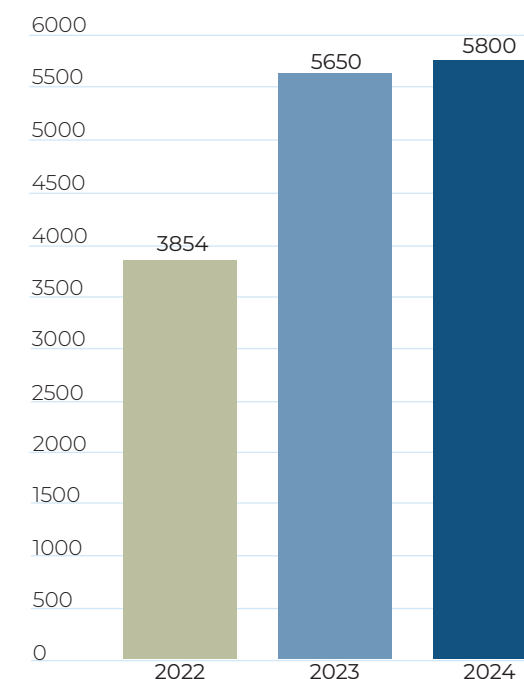

Training and further education in hours

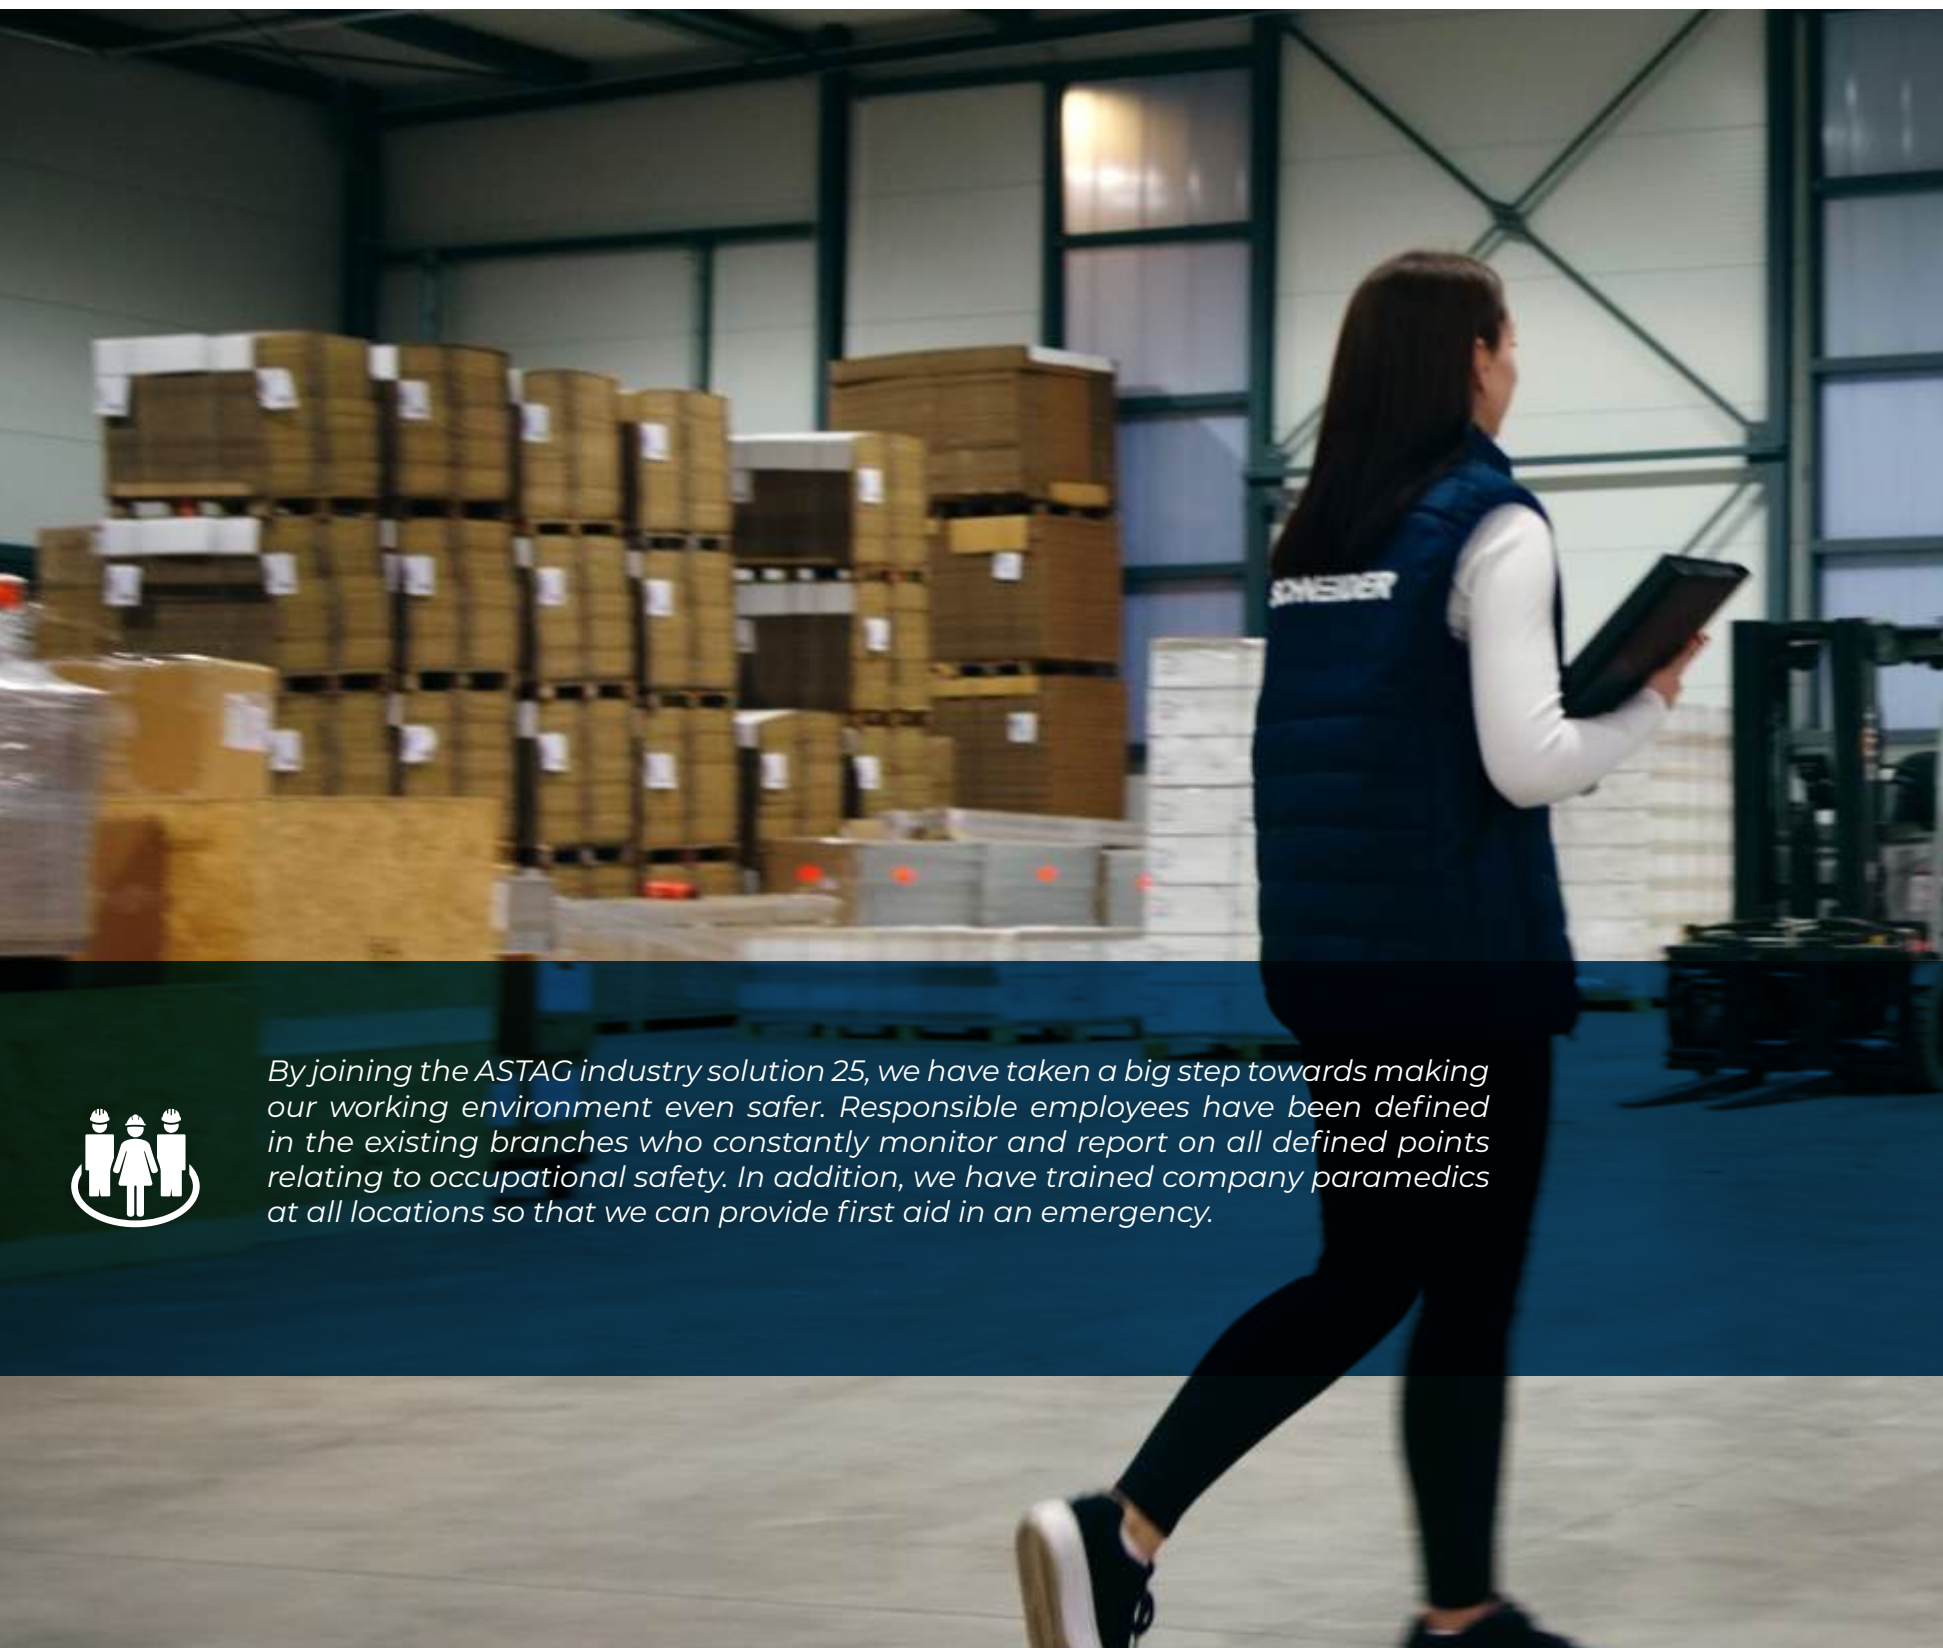

KPI SICKNESS-RELATED ABSENCES (IN DAYS) PER YEAR

The key figure of absences due to illness is an important indicator that is now continuously collected at Schneider through the newly established sustainability management. It shows how many employees are unable to work due to illness within a year. This data has now also been collected across the USA for the first time.

The analysis shows that sickness-related absences have risen steadily in recent years. This can only be seen as negative to a limited extent due to the growth of the organization. To make these figures more meaningful, they were compared with the number of employees. According to the HR department's analysis, the average sickness rate was 2.90% in 2022, 3.22% in 2023 and 2.71% in 2024. On average, the sickness rate for office occupations is approximately 3%.

By joining the ASTAG industry solution 25, we have taken a big step towards making our working environment even safer. Responsible employees have been defined in the existing branches who constantly monitor and report on all defined points relating to occupational safety. In addition, we have trained company paramedics at all locations so that we can provide first aid in an emergency.

OCCUPATIONAL HEALTH AND SAFETY

GRI: 403

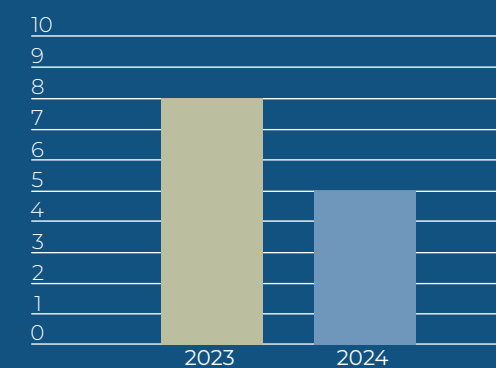

Our commitment to ensuring occupational safety reflects our determination to create a safe and secure working environment for all. We place great importance on the health and well-being of our employees and consider safety an integral part of our corporate culture.

The Schneider Group assumes responsibility for its employees and strives to create and maintain an attractive working environment for them. We want to maintain the health of our employees. Therefore, it is our goal to ensure a high level of occupational safety at all locations.

The Schneider Group expects its employees, especially managers, to always be committed to occupational safety. The occupational accidents indicator shows how many accidents or injuries have occurred in the workplace. Many workplace accidents in an organization indicate unsafe workplace design or lack of safety precautions. This can lead to employees not feeling safe at work. This in turn can lead to a higher error rate or lower quality.

Accidents at work

The number of accidents at work was reduced to five, although more branches were surveyed. We would like to continue to raise awareness of the issue in the shops in order to further reduce the risk.

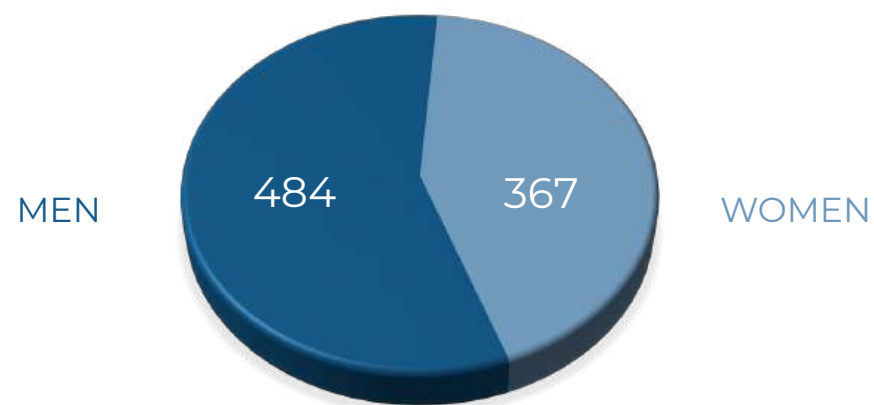

DIVERSITY

GRI: 405

Our commitment to promoting diversity reflects our commitment to an equitable future. We are proud of our company culture and see the diversity of our workforce as a strength to contribute to change.

We strive for a heterogeneous and equal environment in which everyone can contribute and develop according to their abilities. Currently, one third of employees in Switzerland are female and two thirds male.

Schneider has always been open to flexible working time models. Currently, one sixth of the employees work part-time, which allows families and trainees in particular to better balance work and personal life.

NON-DISCRIMINATION

GRI: 406

We respect the personal dignity and personal rights of each individual. In its dealings with employees and in its cooperation with business partners, Schneider is guided exclusively by objective and comprehensible criteria.

We guarantee our employees a working environment in which discrimination as well as any kind of harassment and disadvantages on the grounds of race or ethnic origin, gender, religion or belief, disability, age or sexual identity are not tolerated.

Schneider expects its employees to respect different views of life and cultural and country-specific characteristics in their dealings with other employees, applicants and business partners. We also expect our managers to ensure and promote equality between men and women in their professional lives.

No complaints were submitted to the internal anonymous reporting office in any of the branches.

Our measure and progress

Including working environment:

We create an inclusive work environment where all employees feel valued and supported. Training and workshops promote awareness of diversity and non-discriminatory behavior.

Promote equal opportunities:

We are committed to promoting women, ethnic minorities and other under-represented groups in all positions. Our recruitment and promotion practices are designed to build a diverse workforce.

GOVERNANCE

SUSTAINABILITY KNOWLEDGE

Sustainability knowledge is an indispensable part of our business success. By actively addressing the impacts of our actions and integrating sustainable practices into our business strategies, we are on the path to a more sustainable future.

GRI: 307

Conclusion:

We are proud to be a company that not only focuses on economic success, but also takes responsibility for the world in which we live and work. By applying sustainability knowledge, we set an example for a better future and help make a positive contribution to society and the environment.

Why is sustainability knowledge important?

Long-term success:

Sustainability knowledge is critical to our long-term business growth. A sound understanding of the impact of our actions on the environment, society and the economy enables us to develop sustainable business strategies that will ensure our success in the future.

Risk management:

The identification and understanding of sustainability risks are of great importance in order to minimize potential negative impacts on our company. Knowledge of environmental, social and governance-related risks enables us to take proactive measures and prepare for unforeseen challenges.

Customer confidence and image:

More and more customers prefer companies that act sustainably and make a positive contribution. Having the right sustainability knowledge allows us to communicate credibly about our sustainability efforts and gain the trust of our customers.

Innovation potential:

Sustainability knowledge also promotes the innovation potential of our company. It opens opportunities for us to develop Sustainable products and services that meet the needs of our customers while addressing environmental and social challenges.

Application of sustainability knowledge in the company:

Sustainability strategy:

Our sustainability knowledge forms the basis for the development and implementation of our sustainability strategy. We set ourselves clearly defined goals and implement measures to achieve a positive impact and bring about sustainable change.

Transparency and reporting:

We are committed to transparent reporting of our sustainability performance. Having the right sustainability knowledge enables us to measure, evaluate and communicate our performance to show our progress towards a more sustainable future.

Employee engagement:

Sustainability knowledge is also promoted within our team. Local initiatives enable our employees to deepen their understanding of sustainable practices and actively participate in our sustainability initiatives.

Collaboration with stakeholders:

Sustainability knowledge enables us to collaborate with our stakeholders, including customers, suppliers, NGOs and regulators. Together we can address challenges and develop innovative solutions.

OUR CERTIFICATIONS

GRI: 103-2 | GRI: 401-1

Our commitment to compliance goes beyond simply meeting regulations. We see compliance as the foundation for sustainable growth and long-term success. Responsible and ethical business conduct strengthens the trust of our customers, business partners and investors and enhances the reputation of our company.

Compliance is a cornerstone of our corporate culture. We place great emphasis on complying with all applicable laws, regulations and standards in our business practices. Our compliance philosophy is based on the principles of integrity, transparency and accountability. Each employee has a responsibility to adhere to our compliance guidelines and to promote ethical behavior. This includes regularly auditing and confirming compliance with the relevant guidelines and laws via independent certifications.

Our company is currently certified in the following regulations:

Our journey towards sustainable compliance is far from complete. We are aware that the requirements and framework conditions are constantly changing. Therefore, we will continue to work on the further development and improvement of our compliance management system in the future. Our goal is to be a pioneer in the field of ethical corporate governance and to convince our stakeholders of our responsible business practices.

ANTI-COMPETITIVE BEHAVIOR

GRI: 206

Our values are the foundation of our business. We are committed to always acting according to the highest ethical standards at all times in the competitive environment. Our competitive behavior should be characterised by fairness, integrity, legality and transparency.

Schneider respects fair and equitable competition. Employees are obliged to comply with the relevant laws regulating competition.

In general, the applicable legal provisions prohibit, in particular, agreements or concerted practices with competitors regarding prices or conditions, market or customer divisions, as well as unfair competitive practices.

Not only a specific agreement, but also concerted practices and informal discussions that have the purpose or effect of restricting competition are prohibited.

ANTI-CORRUPTION

GRI: 205

Our commitment to fighting corruption is unwavering and stems from our commitment to a fairer and more sustainable world. We are proud of our progress to date and look to the future with confidence as we continue to help eradicate corruption and promote an honest society with integrity.

Corruption undermines the confidence of citizens in the integrity and functioning of the economy and also causes considerable damage to business and the national economy. Corruption in this sense is any abuse of an official function to obtain an advantage for oneself or a third party.

Schneider firmly rejects the bribery of business partners with money, valuables or other benefits of monetary value. Employees are prohibited from demanding, being promised or accepting money or objects of value in return for the purchase of products or other services.

The giving or acceptance of benefits of any kind is strictly prohibited if they could create the impression of improper influence or even obligation. This also applies to hospitality and invitations to events that go beyond customary and legally permitted practices. Inadmissible benefits may also not be provided indirectly via third parties.

Our measures and initiatives

- **Internal training and awareness raising:** We continuously invest in training and programs to raise our team's awareness of the importance of fair competition and the risks of anti-competitive behavior. This includes training on antitrust, fair marketing and transparent communication.
- **Policies and Code of Conduct:** Our internal policies and Code of Conduct clearly set out our expectations of all employees and emphasise the need to act in accordance with applicable laws and regulations.
- **Whistleblower system:** We have established an anonymous reporting system through which employees can report concerns about anti-competitive behavior or other ethical violations without fear of reprisal.

Our measures and progress

- **Risk assessment and prevention:** We conduct regular risk assessments to identify potential corruption risks. Based on these findings, we implement preventive measures to prevent corruption.
- **Strict guidelines and training:** Our employees receive regular training on ethical behavior and corruption prevention. Clear policies and procedures help sensitize and empower them to potential threats.
- **Supply chain integrity:** We require our suppliers to share our values on integrity and anti-corruption. Suppliers are carefully screened for their ethical standards.

FORECAST

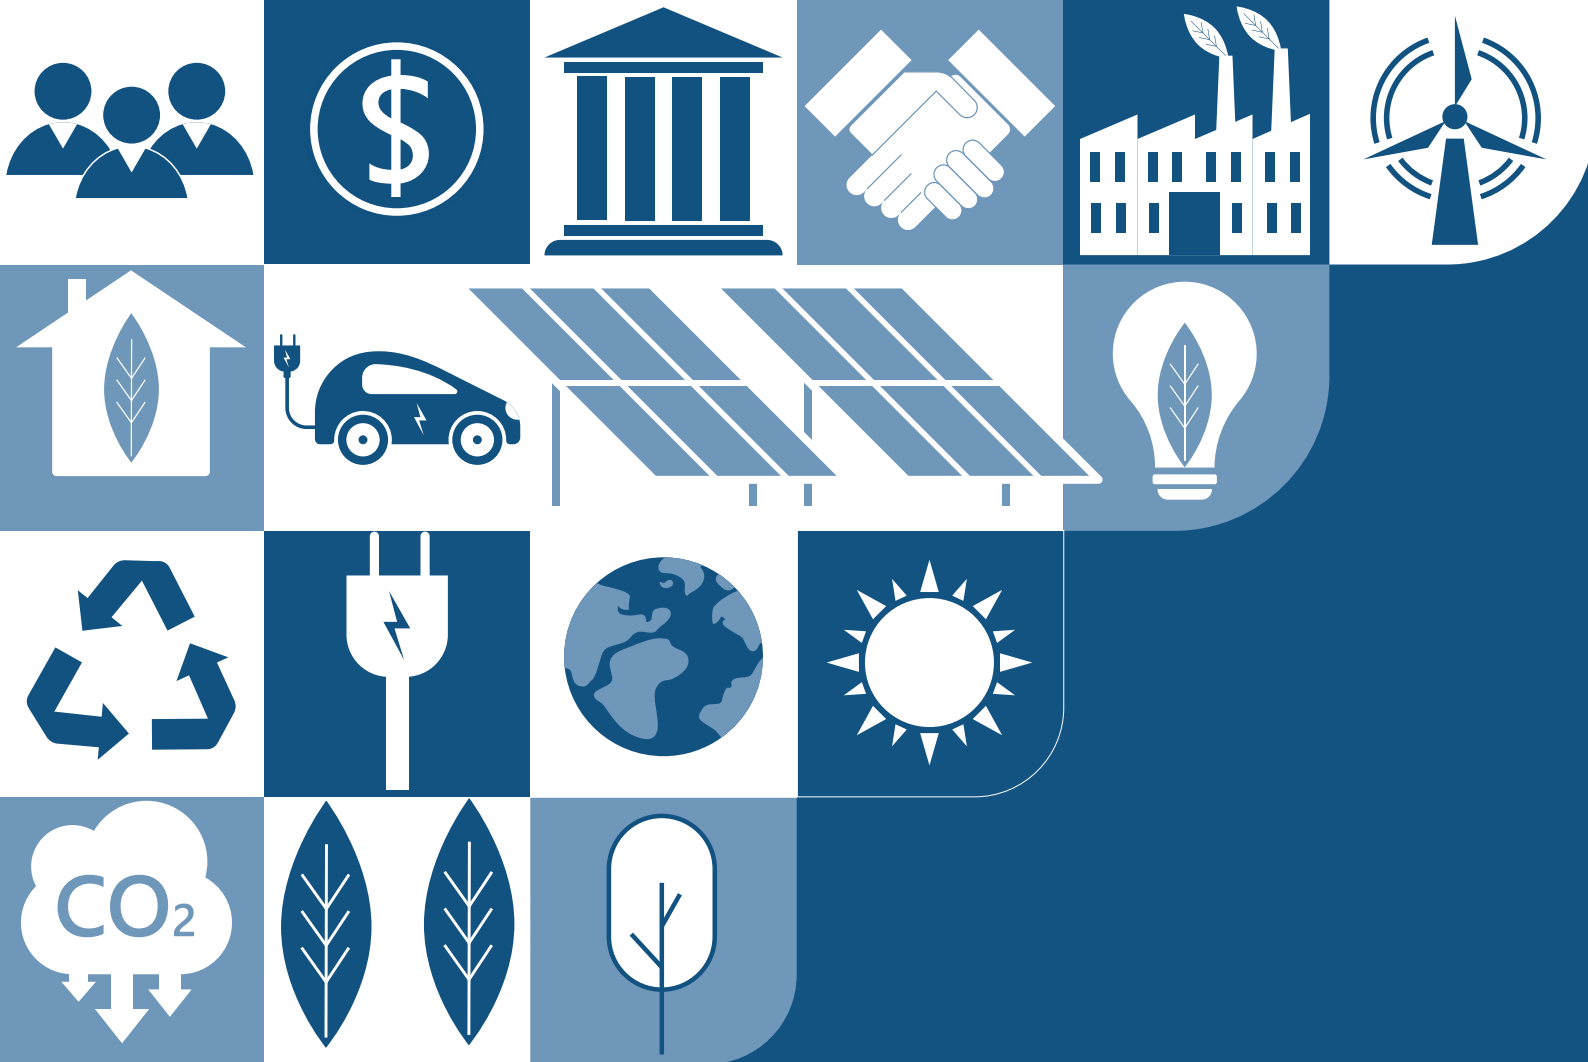

In the coming years, sustainability management will be rolled out worldwide. We intend to use the knowledge and experience gained when integrating the other sites and linking them to the existing sustainability management system.

The Schneider Group will continue to be supported in its implementation by the neutral Swiss foundation myclimate. The focus will therefore be on expanding sustainability management.

- Rolling out sustainability management worldwide
- Plastic-free warehouse management
- Raising awareness among the workforce
- Establishment of a supplier management system
- Improvement of the collected key figures
